

Support to meet requirements of Texas's Alyssa's Law

With Alyssa's Law now in effect in Texas, all school districts and open enrollment charter schools in Texas must have silent panic alert technology installed in their classrooms by the 2025-2026 school year.

Lightspeed partners with industry-leading providers of life-safety systems to enable districts the flexibility to select the best solutions for both classroom audio and essential communications.

Silent Alert Notification

SILENT ALERT NOTIFICATION: ALWAYS AT THEIR FINGERTIPS

Lightspeed installed systems integrate with life-safety systems to allow a teacher to initiate an alert directly from their microphone.

Integration with existing life-safety systems provide districts with a cost-effective solution to meet new laws and mandates like Texas's Alyssa's law and increase their building safety and security measures.

The combined solution allows districts to create the custom solutions best for their schools, while also adding the many benefits to the learning experience of clear and even sound distribution in the classroom.

Initiate alerts from the teacher's Flexmike

- To initiate an alert the teacher simply holds down the volume buttons simultaneously for three seconds on the Flexmike.
- This activates the contact closure function with the installed Lightspeed solution.
- The external life-safety system senses the contact closure to perform a prescribed action, notifying the appropriate parties of a classroom alert.

LIGHTSPEED INSTRUCTIONAL AUDIO: PERFORMANCE AND VERSATILITY

Lightspeed delivers the best distribution of intelligible sound throughout the room and wireless connectivity for media sources, all with no audio dropout, and no interference with Wi-Fi networks or other technology. Systems grow with your instructional needs, supporting all types of student-centered and small-group learning.

Topcat®

Easy-to-install, full-range audio for media-rich classrooms
